Keep close tabs on your storage sites—even when you can't be on-site.

Think you can't be everywhere at once? Think again. With the new Centershift Store Mobile for iPhone and iPad application, you can manage all your self storage units from virtually any location. This powerful app allows you to monitor key statistics for your storage sites. Plus you can get real time data—including net rental activity, gross potential, projected rent, and delinquency—right from your mobile device.

Know the status of any unit, anytime.

Monitoring site statistics is just the beginning. The Store Mobile application also makes it easy to perform a walk-through for every facility, and to update those lists on your iPhone. So you always know which units are occupied, and which are still vacant. And you can access specific unit details, including square footage and paid thru dates, wherever you are.

Maximize productivity at every site.

With the ability to create site tasks right from your phone, and to push those tasks in real-time at the site itself, this clever mobile app helps you keep all your sites productive, all the time. So no one has to wait for you to be on-site in order to get moving on business critical tasks.

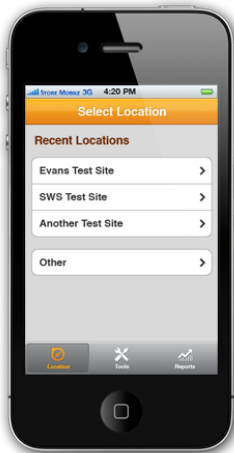

IMPLEMENTATION

- If you have a license for Centershift, you're ready to use the free Centershift Store Mobile application. Just have your Store Login credentials ready, and visit the iTunes store to download the app free of charge.

Rental Activity

"It's a quick and easy way to keep tabs on my facilities on the fly. I love having up-to-the-moment status of all my properties' rental activity. If I hear of an issue at a property, I can quickly drill into the rental level details on my iPhone. It's really amazing what Centershift has done."

Nick Caslov, CEO of Storage Deluxe

"Building an application for the iPhone and iPad was an obvious play for Centershift. We introduced Internet-based systems to the self storage industry, our latest software was built on a powerful service-based architecture, and this new iPhone product further demonstrates the power and flexibility of that new architecture. Coupled with the most advanced handheld technology, self storage operators can monitor sites and perform updates in real time with the touch of a finger."

Mark Smith, Centershift Vice President of Product Management
